### Polish Presidency of the EU: Time to Start Work towards the 2020 Road Safety Target

*1<sup>st</sup> July 2011, Brussels* – “The Polish Presidency <sup>1</sup> should view road safety as a way to help the EU economy regain its competitiveness. Societal costs resulting from road deaths can be reduced by significant amounts, higher than the bailout package currently under discussion for Greece,” declared Antonio Avenoso, ETSC<sup>2</sup> Executive Director.<sup>3</sup> “The Polish Presidency has the chance, but also the responsibility, to maintain the political momentum in reducing road deaths across the EU, particularly after the good reductions in the number of deaths recorded in 2009 and 2010,” added Mr. Avenoso.

The Polish Presidency will work together with the European Commission when the latter will overhaul the guidelines for the Trans-European Network for Transport (TEN-T). The European Commission announced in the 2010 “Road Safety Policy Orientations” that EU funding would only be granted to projects compliant with the Infrastructure Safety Directive and the Tunnel Safety Directive. “ETSC continues to support this initiative. Every year between 1.5 and 2 billion euro of EU funds are spent on building roads in the EU, it is the EU’s duty to ensure that these roads are built safely.” said Mr. Avenoso.<sup>4</sup>

The Polish Presidency must also liaise with the European Parliament from day one to ensure the adoption of the Cross Border Enforcement Directive is completed. Once adopted, this piece of legislation would bring significant road safety benefits. Mr. Avenoso added that an agreement is on the table, and “the adoption of the Directive would introduce equal treatment of non-resident and resident drivers and, most importantly, save lives on Europe’s roads.”

“Poland should also use its EU Presidency stint to increase the level of safety on its roads,” declared Mr. Avenoso. Poland’s figure of 102 road deaths per million inhabitants is more than three times larger than that of the best performing EU countries: Sweden (28) and the UK (31), and significantly above the EU average of 62 deaths per million inhabitants. High speeds and unprotected road users are two particular areas that need attention,” said Mr. Avenoso.

#### Background:

In parallel with the expansion of its road infrastructure, Poland has mandated automated speed enforcement on the motorway network, a policy which is currently being applied. However, automated enforcement has been coupled with an increase of the maximum allowed speed limit to 140 km/h, making Poland the country with the highest speed limit in the EU. While the collision risks increased on the motorways, another factor of concern is that speed often migrates and higher speeds spill over onto adjacent rural roads. Moreover, Poland was one of the countries with the highest percentage of drivers breaking the speed limit on rural roads: 70% in 2008 before speed measurements were stopped.<sup>5</sup>

Unprotected road users are another cause for concern in Poland. The total share of these road user categories – pedestrians, cyclists and riders of powered two-wheelers - represents 49% of all road deaths registered in Poland between 2007 and 2009. There is an acute need for a further extension of the infrastructure for cyclists and pedestrians. Enforcement, especially at pedestrian crossings, should be increased. The drivers' awareness of the dangers of not respecting the rules and the consequences for unprotected road users must also be raised.
